

148 BPM

Lucas Lejeune

## Introduction

This book is not meant to be read in its entirety. Since it is a list, it would qualify as a work of conceptual poetry, or "uncreative writing" I haven't read it from beginning to end and probably never won't. It is, however, perfectly acceptable to grab a handful of poems here and there. You may be lucky and find something interesting.

It contains every title of every track available for download on EktoPlazm, the main online source for free-to-use electronic psychedelic trance music.

Despite its very distinct and repetitive patterns, this genre offers a wider range of sub-styles and atmospheres than other electronic genres such as Techno, Drum'n bass, Dubstep and so on. It goes from beatless ambient soundscapes to high-speed, chaotic nonsense and everything in between.

These 13.000+ tracks are sorted by their speed value expressed in beats per minute, or BPM. A number at the beginning of each poem indicates the speed of the tracks it contains. As expected, the speed keeps getting faster. At zero, the first poem don't even involve a single beat, whereas in the last pages, the tracks go up to 200 BPM and more.

Inside each poem, the tracks are sorted by date of release. If released on the same date, they're left in the order in which they appear on the album or compilation.

I have put everything in lowercase, and have disposed the titles next to each other without any punctuation, so as to form a unique, weirdly connected sentence for each BPM value.

Beside these light modifications, the text is given to you as it is.

Have fun, and don't forget to stay hydrated!

- o. Intro trailer surrender to surreality sentient scourge sample magic dubs chillida leku first world passing the veil edge of solitude zen attitude high on mountain maa 432 see sharp essence submerge ophiuchus the great alignment killin' it with blue balls south & west deep sea civilization.
